SOFTWARE ENGINEER

June 2025 - Present

- Currently working as a backend leaning software engineer in the Personal and Business Pricing team. Implementing features which enable new product launches and their corresponding pricing for consumer facing Wise products.
- Worked on decoupling tax calculations from pricing calculations in the tier 1 backend service, in order to respond to changing tax requirements while remaining compliant with price change notification requirements.
- Introduced automatic fee document generation to allow for ease of fee disclosure, in keeping with various regulator requirements while enabling agile price adjustments.

SOFTWARE DEVELOPMENT ENGINEER

October 2021 - June 2025

- Worked as a full-stack software engineer (SDE II) in the Prime Video Website client team. Developed frontend widgets in React.js and backend APIs in Scala for integrating with dependency services, in a microservices architecture, to deliver for our customers. Features worked on include Age Verification, Devices Management, Navigation Bar, Parental Controls, Profiles and Viewing Restrictions.
- Core contributor for implementing the channels integrated Prime Video Navigation Bar on Web.
- Technical Lead for introducing the Age Verification Page to the Prime Video Website. The addition of this page allowed flagship R21 rated content, such as 'The Boys', to be streamed on Prime Video in Singapore.
- Core contributor for adding Profile level PIN and locks functionality to Prime Video. I was responsible for implementing the PIN & Locks Page for PIN management and setting Profile restrictions.
- Served as the Q1 2023 and Q4 2024 Scaling Point of Contact for ensuring that Authentication, Navigation Bar, Profiles and Settings features on the Prime Video Website were adequately scaled for upcoming events.
- Improved the automatic language selection, resulting in an approximately 50% decrease in manual language selection by non-English speaking Prime Video customers.
- Successfully carried out an API migration which resulted in a latency improvement of approximately 30% in key marketplaces.

SUMMER TECHNOLOGY DEVELOPER

July 2020 - August 2020

- Interned in the Chief Technology Office (CTO) team of architects, while also serving as a software developer, in an intern team, on a machine learning project. As an architect intern, I ensured that the machine learning project adhered to and furthered the firm's technology strategies.
- Utilised Anaconda and AWS to develop machine learning models for analysing and classifying batches of FNZ trade data generated during the Covid-19 Pandemic.
- Our intern team won the prize for the best intern project within the Wealth Processing transaction cycle.

Education

UCL

[London, UK](#)

MSC SOFTWARE SYSTEMS ENGINEERING - DISTINCTION

2020 - 2021

- **Key Course Units:** Requirements Engineering and Software Architecture; Software Abstractions and Systems Integration; Complex Networks and Web

University of Manchester

[Manchester, UK](#)

BSc (HONS) COMPUTER SCIENCE - 1ST CLASS

2017 - 2020

- **Subject Areas:** Algorithms, Artificial Intelligence, Computer Architecture, Distributed Computing, Programming, Software Engineering

Skills

Professional Experience Java, Scala, Typescript, React, HTML & CSS, SQL

Working Knowledge Python, C, C#

Previous Projects

ORCA: Online Register for Classes with Analytics

[HTTPS://GITHUB.COM/UCL-ORCA/ORCA](https://github.com/UCL-ORCA/ORCA)

November 2020 - April 2021

- ORCA is a web application for use by academic institutions to monitor students' engagement with online learning in a non-obtrusive way. It was a team project completed by UCL MSc students in partnership with Microsoft, as part of the UCL Industry Exchange Network.
